# Ian Korovinsky

289-879-9641 | ikorovin@uwaterloo.ca | LinkedIn | GitHub | Portfolio

## Education

**University of Waterloo** — Waterloo, ON
*Bachelor of Software Engineering, Cumulative GPA: 3.879* — *September 2023 - Present*

- Neo Scholar Finalist, CRV Fellow, Former Cybersecurity Club President, Waterloo Blockchain Director of Events
- University of Waterloo Youth and Innovation Project National Advisory Council Member (2022 - Present)

## Technical Skills

**Awards**: 11x Hackathon Winner, $450,000+ in Scholarship Offers, Governor General's Academic Medal
**Coding Languages**: Python, Typescript, C++, Go, SQL, C, C#, Java, Solidity, Rust
**Frameworks**: Megatron, PyTorch, SLURM, Next.js, Tailwind CSS, FastAPI, Turbopuffer, Prisma, LangChain, Django
**Developer Tools**: Docker, AWS (EC2, Lambda, S3, DynamoDB, Sagemaker), GCP, Azure, Temporal, Figma, Git

## Experience

**Baseten** — May 2026 - September 2026
*Research Engineering Intern* — *San Francisco, CA*

- Developed Loops - a **reinforcement learning** tool for open source models (up to **1T+ parameter** models)
- Optimized **multi-node model throughput** and scaling for training using **Megatron Bridge** and **SLURM**
- Worked **hands-on with customers** in early beta, implementing product features and debugging deployments

**Hack the North** — November 2024 - October 2026
*Co-Director* — *Waterloo, ON*

- Led a team of **45+ organizers** to successfully host Canada's largest hackathon for **1000+ hackers** twice
- Broke a world record, organized the inaugural Waterloo Tech Week, and launched a $2K microgrants program

**Thrive Capital** — September 2025 - December 2025
*Software Engineering Intern - Product and Engineering* — *New York City, NY*

- Built an **internal operating system** for 70+ investors, integrating AI-driven automation workflows with **Temporal** and **Next.js**, and semantic search for PDF documents with **AWS S3** and **Turbopuffer**
- Developed **data sync pipelines** using **Snowflake, Cube, Neon, Python, Prisma,** and **Dagster**

**Bloomberg** — January 2025 - April 2025
*Software Engineering Intern - Buy-Side Compliance AI* — *New York City, NY*

- Optimized recommendation accuracy for **1,600+ clients** by fine-tuning a **text classification model** using **PyTorch** and **Transformers** for a **700+ class** problem, while contributing to **three internal ML libraries**
- Integrated advanced features into the **semantic search framework** from my previous internship, which was used as a similarity search service for a **text-to-BDD test generator** deployed to **10,000+ engineers**

**Sibli** — October 2024 - November 2024
*Software Engineering Intern - Mentat* — *Toronto, ON*

- Improved computational speed by **500%** by redesigning and rewriting a **C# ETL data-parsing pipeline** in **Python**, utilizing **SQLAlchemy** for data storage and **openpyxl** for extracting data from Excel spreadsheets
- Contributed to **5 graph algorithms** written in **Neo4j (Cypher)** and **Python**, enabling the extraction of **algebraic and topological relationships** between datapoints in financial models

**Bloomberg** — May 2024 - August 2024
*Software Engineering Intern - AIM* — *New York City, NY*

- Developed a **semantic search service** used by **10,000+ engineers**, powering compliance search workflows serving **1,600+ clients** across **5 cross-org products** in **10 languages**, leveraging **Python** and **Apache Solr**
- Designed an **NLP-based structured data extraction framework** using **Langchain** and **ReAct agents** to support automated compliance rule generation from user search inputs

## Projects

**Axiom** | *Next.js, Typescript, Y.js, Socket.io, Express, SQLite, Prisma*

- Developed a **custom formal proofs editor** using Y.js, Socket.io, and Express for real-time collaboration
- Deployed the editor as a course resource for **130+ University of Waterloo Software Engineering students**
